

EndurancePace / TriHonor

Developer Enterprise Introduction Materials | HUAWEI Health Kit Integration

Developer Entity: TriHonor	Product Name: EndurancePace
Live Platform: https://endurancepace.coachonurai.com	API Base: https://endurancepace-api.coachonurai.com
Contact: onur@trihonor.com	Service Model: SaaS & Mobile Application (B2C & B2B Coaching)

1. Enterprise Overview & Executive Summary

TriHonor is an endurance sports technology and athletic software engineering company. Our flagship application, **EndurancePace**, is engineered to empower amateur, competitive, and elite endurance athletes (runners, triathletes, cyclists, and swimmers). The platform ingests telemetry from modern wearable ecosystems, translating raw physiological metrics into scientifically grounded training load models, dynamic pacing zones, and fatigue management analytics.

2. Project Scenario & Practical Use Case

Through the **HUAWEI Health Kit integration**, users wearing Huawei smartwatches and fitness bands (HUAWEI WATCH GT series, HUAWEI WATCH Ultimate, HUAWEI Band series) can securely synchronize their workouts and physiological telemetry directly with EndurancePace.

End-to-End User Flow:

- **Activity Ingestion:** When an athlete completes a workout, Huawei Health syncs workout telemetry (GPS tracks, heart rate samples, speed, cadence, elevation, and power).
- **Load Computation:** EndurancePace calculates Training Stress Score (TSS), Intensity Factor (IF), and Normalized Pace/Power using Coggan & Banister endurance models.
- **Fitness/Fatigue Modeling:** Computes Chronic Training Load (CTL / Fitness), Acute Training Load (ATL / Fatigue), and Training Stress Balance (TSB / Form).
- **Coach-Athlete Synergy:** Coaches review athlete progress in real-time, adjust weekly training schedules, and provide direct feedback through in-app channels.

3. Target Audience & Market Demographics

EndurancePace caters to dedicated endurance sports communities across Europe and globally:

- **Triathletes & Ironman Competitors:** High-volume athletes requiring multi-sport session tracking and aggregated cross-discipline load calculations.
- **Marathon & Ultramarathon Runners:** Athletes needing precise pacing zones, aerobic threshold tracking, and fatigue recovery monitoring.
- **Road & Gravel Cyclists:** Power-meter and heart-rate driven athletes relying on threshold power and cardiac drift analysis.
- **Certified Endurance Coaches & Academies:** Coaches seeking a centralized platform to manage multiple athletes, distribute workout plans, and track biometric compliance.

4. Project Value Proposition

A. Scientific Overtraining Prevention: By continuously modeling TSB (Training Stress Balance) using Huawei Health sensor data, EndurancePace warns athletes when acute fatigue spikes disproportionately against chronic adaptation, preventing overuse injuries.

B. Adaptive Pacing & Training Periodization: Workouts automatically adjust target paces and heart rate zones according to real-time fitness progression and environmental conditions.

C. Ecosystem Enrichment for Hardware Users: Gives Huawei wearable users access to an elite-grade endurance analytics platform on par with high-end cycling and triathlon software suites.

5. Project Opportunity & Huawei Synergy

Huawei's TruSeen™ heart rate sensing and dual-band GPS hardware excel in endurance sports accuracy. By bridging HUAWEI Health Kit with EndurancePace, both ecosystems achieve significant mutual benefits:

- **Attracting High-Value Athletes:** Encourages competitive runners and triathletes to adopt Huawei wearable devices knowing they seamlessly feed into dedicated endurance coaching software.
- **Enhanced Device Stickiness:** Continuous daily feedback on recovery, readiness, and fitness curves significantly increases daily active engagement with Huawei Health devices.
- **Market Expansion:** Bridges European endurance athletes and running clubs directly into the Huawei developer ecosystem.

6. Data Security, Privacy & Regulatory Compliance

Data privacy and security form the bedrock of TriHonor and EndurancePace architecture:

- **Zero Data Resale:** We never sell, monetize, or disclose personal athletic or health data to advertisers or third parties.
- **Transport & Storage Security:** 100% of data transmissions utilize TLS 1.3 encryption. Credentials and sensitive tokens are encrypted at rest with AES-256.
- **Explicit User Consent:** Health kit data is exclusively accessed after the athlete explicitly authorizes OAuth permissions. Users can revoke access at any time via in-app settings.
- **Regulatory Compliance:** Built in compliance with GDPR and international data protection standards, including full user data portability and account deletion rights.
- **Published Legal Documentation:** Fully public Privacy Policy (<https://endurancepace.coachonurai.com/privacy>) and User Agreement (<https://endurancepace.coachonurai.com/terms>).
